E.C. Styberg Engineering
Update

It has been over a year since we lost our company president and son of our founder. The company is going strong based on the foundation that Mr. Styberg left us. We are running the organization as Mr. Styberg would want us to, as a family. We are continuing several of Mr. Styberg's practices while bringing the company into the 21st century.

Over the years, Styberg has added new processes in order to compliment the already established processes, but also what our customers have needed. Styberg keeps its customers in mind at all times. Many organizations claim that they keep their customers number one, but Styberg Engineering has proven that it goes over 100% for 92 years, and our present customers agree.

When it comes to metal (carbon or stainless), Styberg can do just about anything that someone would need done. Whether you need a stamping, forming, extruding, spline shaving, heat treating, machining CNC lathes/verticals, gear cutting, welding, spotwelding, laser welding, laser cutting, NDT testing, surface grinding and the list goes on. Styberg can make a very simple component to a very thick complex piece for any end user.

If you want a group that will treat you like family, and offer services far above other component manufacturer, you must try Styberg Engineering. No job is too difficult. Any questions please contact our Engineering group (262-637-9301) who will be eager to answer all of your questions. Give us a try, and you will not be disappointed.

Thank you
John Baker
